---

Sounds like a power supply has gone on you. Cheap power supplies are just garbage, if you buy cheap expect to replace it possibly 4 times a year or higher. Try to use a brand name when replacing the power supply, no name ones are just a quick fix. If it is not the power supply, there is a deeper issue and you will probably be needing our services.

The power supply is located where the plug fits into the back. It is very simple to replace if you are electronically inclined.
